Premium

DRIVEWAY COLLECTION

Premium quality and style.

If you would like to add undeniable kerb appeal to your home, look no further than the Premium Driveway collection from Tobermore.

Whether it's extra car parking or an upgrade to an already existing driveway, your driveway can add value to your home. Create a first impression to be proud of and invest in a premium driveway to make your home stand out from the rest.

Finished with complementary planting, your driveway can add instant kerb appeal and an inviting entrance to your home.

One range, a world of possibilities.

Artro is a linear style paving block, perfect for driveways and trafficable areas.

Inspired by the style and scale of traditional clay paving, Artro brings the concept up to date with a wide range of colour options to suit traditional and contemporary style homes. Artro's warm palette brings traditional appeal while the cool palette brings together popular grey and neutral tones.

The Artro range can be laid in a linear or herringbone laying pattern, allowing you to recreate the aesthetic appeal of European clay pavers.

Elegance

DRIVEWAY COLLECTION

Traditional styling.

Driveways have become a multi-functional part of the modern home. As well as creating a parking facility, a well landscaped driveway enhances the style and value of a property and provides a safe play area for children.

The natural, aged appearance of the Elegance Driveway collection is ideal for traditional settings and will bring distinctive quality and charm to any driveway. With the appeal of aged stone combined with superior manufacturing quality from Tobermore, the Elegance Driveway collection is the perfect choice for anyone looking for a unique and stylish driveway.

Walling

Versatile masonry products for homes, gardens and retaining walls.

At Tobermore, we offer more than just paving. We also use our years of experience, expertise and world-class technology to develop and manufacture facing bricks, walling and masonry products.

These bring together functionality and durability with stunning aesthetics, allowing you to build your dream home or outdoor space brick by beautiful brick.

Garden Stone Heather

Garden Stone

✓ Ef-Stop

Free-standing double sided wall.

These tapered blocks are faced on both sides so are perfect for creating curved edges or separating different areas of the garden and making beautiful feature walls.

- Double sided blocks can be used to create curved walls
- Cost effective walling option
- Easy to build, mortar-free walling for DIY enthusiasts

Secura Lite

Ef-Stop

Mortar-free retaining wall.

Secura Lite is a mortar-free, dry building product. This means it is incredibly easy to install and perfect for smaller walling projects at home. The tumbled, aged finish creates a random stone effect, offering a charming rustic appearance for your feature walls.

- Easy to build and perfect for small projects
- Can be built without mortar
- Aged, antique random stone appearance
- Vibrant long-lasting colours

Why choose Tobermore?

Our Commitment To You

At Tobermore, we go above and beyond to bring you the highest quality block paving and walling products, as well as an outstanding service.

Reputation For Quality

We've become well-known for our high standards. All our paving and walling products are rigorously quality checked throughout the manufacturing process, right up to when they arrive at your home.

Nationwide Stockists Across UK And Ireland

In Northern Ireland, we have paving centres open to the public in Tobermore and Bangor. We have a large network of approved stockists across GB and the Republic of Ireland waiting to help you.

Extensive Product Range

All our paving and walling products feature various styles, finishes, sizes and colours, meaning there is always a product to suit your home, your preferred style and your budget.

Advice & Guidance

We have a host of online inspiration and design tools to help you bring your project to reality. Browse our Inspiration Gallery for ideas, then use our Paving Creator or Paving Visualise Service to get started.

25 Year Guarantee on Block Paving

We guarantee the structural integrity of our paving blocks for 25 years from the day they are installed. It means you can be sure your products will stand the test of time.

Responsible Manufacturer

Tobermore is committed to manufacturing responsibly. Our factories have their own wind turbine, solar panels and rainwater harvesting system and we've cut our packaging carbon footprint by 20% too.

Network Of Registered Contractors

The Tobermore Registered Contractor Scheme will help you find a paving and walling contractor in your area. Use our handy online search tool to find a Tobermore Registered Contractor for your project.

✓ Ef-Stop®

Efflorescence is the white substance which can appear on the surface of concrete paving. The cause of Efflorescence is simply a chemical reaction between the cement in the concrete and rainwater.

If efflorescence appears on your paving, the key thing to remember is that is temporary and poses no risk to the structural integrity of the paving. It will wash away over time.

During manufacturing, we cure our products in a warm vapour which ensures that efflorescence is dramatically reduced. This process also enhances the colour, improves the strength and cures the products much faster. We call this process Ef-Stop

✓ PrimeTop®

PrimeTop is the name we have given to the premium, hard-wearing surface layer on our paving products.

This layer adds a hardened surface with enhanced strength, vibrant long-lasting colours and increased resistance to wear and tear.

New Design Tool

Picture your new paving at your home instantly with our free online AR visualisation tool.

Do you want to know how new paving would look at your home? Are you struggling to Picture It? With our free online tool, you can use your mobile phone to get an instant visualisation of your new patio or driveway.

Simply open Picture It on your phone, take a photo of your outdoor space and choose your paving. You can take as many photos as you like, and quickly switch between paving ranges, styles and colours in a single tap. Picture It works best on your mobile phone, but you can use the tool on your computer too, if you prefer.

How does Picture It work?

Step 1

Launch the Picture It tool on your mobile and go outside.

Step 2

Take a photo of your existing patio or driveway.

Step 3

View the Tobermore range, try different paving styles and colours.

Speak to a Tobermore Paving & Walling Advisor

If you would like to start an outdoor project and have lots of questions - speak to a Tobermore Paving & Walling Advisor.

A Tobermore Paving and Walling Advisor can make your life easy and help you make the right decisions when choosing a new driveway, patio or walling feature. Getting advice at the outset can save you time and energy with simple, practical and relevant advice.

This is a **no-obligation** advice service to assist you on your journey to achieving a fantastic project.

Instructions & Warnings

CORE TERMS (PAVING & WALLING)

Product

All products should be carefully inspected for defects or damage upon delivery and prior to being laid or fitted.

Product Information

Within Tobermore, design and development of products is a continuing process, and product information is subject to change without notice. Accordingly, please check with Tobermore to ensure that the product information you have represents the most up-to-date product information.

Prior to Installation

Prior to opening the packs check that all the batch code labels match. The batch code labels can be found on the outer packaging. For example, O4D22N. It is good practice to sort products to ensure consistency of colour, texture and dimensional tolerance. Any defects must be reported without delay. If products are installed with any form of defect which was clearly apparent prior to installation the installer will be responsible for all costs incurred to rectify the issue.

Installation

All products should be installed in accordance with the latest British Standard.

Colour/Shade & Texture

Tobermore produces paving and walling products with excellent density and durability. All products are manufactured in batches using naturally extracted raw materials including aggregates, pigments and cement etc. Products such Braemar, Sienna, Fusion, Mayfair Flags, Manhattan, City Pave and Fusion Kerbs are manufactured using premium naturally occurring granite aggregates. To achieve their final appearance some products undergo secondary processes, this involves shot blasting or grinding the surface of the product.

Whilst we have several factory procedures in place to help control shade, colour and texture within and between batches we cannot guarantee consistency. This is due to the natural materials and secondary processes. Therefore, slight variations in the finished products is normal between and within batches. These variations actually enhance the character and natural beauty of the products.

To achieve the best possible finish we recommend the following advice is followed to evenly distribute any slight variations in shade, colour and texture over a large area.

When the circumstances allow complete one area of paving, one retaining wall or one house / building by using products taken from the same batch. This is achieved by checking the batch code label displayed on the packs.

Always, thoroughly mix products from a minimum of three packs.

Where products are supplied in packs with vertical slices always take them "vertically slice by slice" this ensures that colours are distributed evenly.

When the circumstances do not allow the use of products from the same batch then it is extremely important to minimise possible colour banding /shading by always, thoroughly mixing products from a minimum of three packs concurrently with some overlap between deliveries / batches.

Where products from different batches are being installed in the same area of paving, wall or building it is the installers responsibility to carry out a colour match check by comparing colours from each batch. If a noticeable variance in colour / shade or texture is visible, do not proceed with the installation and contact your supplier for further guidance.

Mixing thoroughly from a minimum of three packs is of particular importance when installing single colours such as Golden, Buff, Natural, Charcoal, Graphite, Silver, Mid-Grey, Sandstone, Alto Silver, Aaron Stone, Jura Grey and Innis Black.

During installation the installer must make regular visual checks to ensure the blending of colours is consistent.

We would always recommend that when purchasing products, especially in larger quantities, that they are all ordered at the same time.

Please note that the colour of new products will inevitably vary compared to those that have been installed for a period of time as weathering does take place. All colour illustrations are as accurate as the printing process will allow. For a more accurate colour match please refer to actual product samples, which can be provided.

Colours and textures illustrated are representations and therefore should not be expected to be an exact match.

The overall visual appearance of a completed installation should only be assessed from the normal viewing distance. Variations in colour/shade and texture are technically harmless, do not affect the products performance and are not deemed to be a product defect.

We will not be held liable for any discolouration or staining caused to product which has been stored incorrectly.

Note: Whilst we strive to ensure consistency, complimentary products such as Kerb Specials, Step Flags, Facing Brick Specials, Historic Circles etc. may not be an exact colour / texture or shade match to the standard version of the product as they will have been manufactured at varying times using different processes.

Tegula

Tegula is manufactured using a secondary process that distresses the edges and corners of the blocks to give the desired aged antique appearance. The process randomly distresses the blocks, therefore some blocks will be more distressed than others will, this is completely normal and does not affect the product performance.

Staining

Some chemicals that are commonly used in gardens such as lawn feed containing Ferrous Sulphate can stain concrete products. Any chemicals that are spilt must be removed immediately by rinsing away with clean water. Please check the information on the instruction label of the container holding the chemical.

As referred to in Tobermore's Conditions of Sale

A light power hose at medium pressure is generally all that is required to clean general dirt and grime. Any jointing material which is removed must be replaced. Do not use high pressure power washers as aggressive power-washing can damage the product surface. A trial area should be tested before large scale powerwashing takes place.

Moss, Lichen and Algae

Thick growths of moss or lichen must be removed first by scraping out the joints and then treating the area with a moss killer such as anti-moss paving cleaner. Anti-moss is designed to remove moss, lichens and algae. It is best applied in dry weather. After being applied it will take a few days to be fully effective. Once the moss and lichens have been killed, they can easily be brushed off. Anti-moss also leaves a residue in the sand joint which will help reduce the likelihood of re-growth. The manufacturer's instructions should always be followed when using any cleaning agent.

Weeds

Large weeds should be removed by hand and then the area treated with a weed killer (available from any good garden centre). Smaller weeds can then be treated directly with weed killer and these weeds should start to die within days. The manufacturer's instructions should always be followed when using any weed killing agent.

Block Paving Sealer

It is possible to seal block paving with a resin material which combats staining and weed growth and which also enhances colour and appearance. The acrylic sealer is sprayed onto the block paving and forms a 'skin' on top of the paving and the jointing material giving an easily maintained finish. The manufacturer's instructions should always be followed when using any sealing agent.

FOR HYDROPAVE PRODUCTS

Installation - Hydropave

Tobermore recommends that its Hydropave products be installed in conjunction with a BS EN 7533-13:2009 designed permeable paving system.

Note: A permeable paving design relies heavily on using the correct aggregates. Prior to installation, we would ask you to test both the 4/20mm coarse graded aggregate and also the 6.3-2mm bedding and jointing grit as per the relevant British Standard specification (BS EN 13242:2002). In particular, the material should be categorised as LA20 according to Table 9, SZ18 according to Table 10 and MDE15 according to Table 11 within this standard. The grit should be insoluble in dilute hydrochloric acid and should be naturally occurring material. In our experience, incorrect use of aggregates is one of the most common reasons for failure of a permeable paving system.

Joint Filling

All joints must be filled to the top with 6.3 – 2mm grit to prevent movement and spalling of the blocks. We recommend that after a few weeks use, any joints which have settled and are not full, are topped up with grit. Joints should be kept filled at all times. You will need approximately one tonne of grit for every 100m² of 80mm paving.

Note: Care should be taken that the permeable joints do not become contaminated as work on the scheme is completed. Special care needs to be taken when soft landscaping is carried out so that soil does not enter the joints. When this type of work is being carried out, the surface of the permeable paving should be protected by an appropriate cover to protect the joints from being contaminated.

Hydropave Maintenance

Please refer to Tobermore's detailed 'Permeable Paving Maintenance Guidelines' available on our website: www.tobermore.co.uk

FOR EASYCLEAN PRODUCTS

Handling & Installation

During installation, the surface should be protected at all times from scratching and abrasion.

Once the protective glue dot has been removed do not stack flags directly on top of each other.

Use a plate vibrator with a rubber mat.

Do not scratch the surface with tools. (Spade, trowel etc.)

User advice

Do not drag garden furniture across the surface of the flags.

Do not pressure wash.

Do not use chemical cleaning products (e.g. solvents/acids).

FOR FACING BRICK & COUNTRY STONE PRODUCTS

Important Note:

Where the circumstances allow, it is beneficial to complete one building / structure using bricks taken from one batch and mixed on site from a minimum of 3 packs to avoid colour banding / shading. If the circumstances do not allow for this then it is important to minimise the possibility of banding / shading by always mixing bricks from 3 packs concurrently with some overlap between deliveries.

Where the site conditions allow, it will also be beneficial to take receipt of as many bricks as possible at an early stage to maximise colour consistency throughout the site.

Installation – Facing Bricks

Please refer to Tobermore's detailed 'Guide to the use of Tobermore Concrete Bricks' available on our website: www.tobermore.co.uk

Installation – Country Stone

Tobermore's Country Stone products are designed to recreate traditional stone sizes and to co-ordinate with standard cavity wall construction. When used in housing projects, a clear cavity must be retained.

All work must be protected during construction and must be designed and built in accordance with accepted industry standards and practice. Builders familiar with conventional brickwork will find that similar installation principles apply.

Joints can be finished flush or tooled depending on the overall effect required. Raked joints are not recommended. It is vital that all horizontal and vertical joints between Country Stone blocks must be compacted and free from voids. Shell bedding should not be used.

Good Practice during Construction - Facing Bricks & Country Stone

- If mortar dry's on the surface of the bricks it will stain the product and may not be removed.
- Mortar extruding from joints should be removed when the mortar is wet and during the process of laying.
- Any mortar smears on the brick surface should be removed by dry or wet brushing.
- Scaffolding should be installed as per regulatory instructions. Please note that mortar can drop and hit the scaffolding and then also go onto the wall. You should inspect the work area at all times to ensure the brick surface remains mortar free.
- When it rains be careful that any wet mortar on the scaffolding does not get 'splashed' onto the wall.
- When work stops or is interrupted by inclement weather conditions, brickwork should be protected immediately with polythene sheeting that is held in place with a suitable fixing. If new brickwork is not protected efflorescence, patchy mortar colour, patchy brickwork and staining can occur.
- Bricks should always be covered with polythene sheets to avoid getting damp or dirty when not being used.

General Cleaning Advice - Facing Bricks & Country Stone

- It is always important to keep bricks as clean as possible while laying and tooling. See Good Practice above.
- If mortar has been allowed to dry on the surface of the bricks the options you have to clean it off are as follows; Each process should be tested first and should ensure the facing bricks are not damaged - Dry brushing b. Wet brushing c. Using a 'like coloured' brick to rub the stained brick d. Pressure washing - should only be used as a last resort as it will damage the surface and the mortar joint if not completed correctly (this method cannot be attempted until the area has been allowed to set for a minimum of 7 days).
- Acid cleaning should be avoided.

Movement Joints and Mortar Guidance - Facing Bricks & Country Stone

1. NHBC recommends that walls constructed of concrete masonry units should have vertical movement joints included every 6m to allow for drying/shrinkage, see PD6697:2019, maximum ratio for brickwork panels is to be 3:1 length : height. PD6697:2019 gives advice on joint positions, the benefit of brickwork reinforcement at window openings is also covered in the same document. Movement joints should be planned prior to commencing any construction to enable them to be concealed behind down pipes etc. and ensure the aesthetics of buildings are maintained.
2. It is important to ensure that the mortar specified for the construction is suitable for the contract, see table 15 of PD6697:2019 - class M4 is the maximum recommended for normal external masonry walls. This should not be exceeded when using Tobermore Concrete facing bricks and Country Stone Walling.
3. We would recommend that you discuss this guidance with all parties involved in the design, construction and installation of the scheme. We also recommend that you refer to BS EN 1996-1-1 and PD6697:2019.
4. Specific professional advice should be obtained at all times before commencing building work.

Important Guidance Information: Tobermore Concrete Facing and Country Stone Walling

1. Professional advice, specific to the project, should be sought before commencement of the building work.
2. Tobermore Facing Bricks have different properties to clay bricks especially in relation to moisture movement. Please refer to 'Guide to the Use of Tobermore Concrete Facing Bricks', which is available on request or at www.tobermore.co.uk
3. Tobermore recommends that vertical movement joints be spaced at no more than 6m apart. Panels of brickwork where the length: height ratio exceeds 3 are particularly vulnerable to cracking; if they cannot be avoided, they should include movement joints at closer centres.
4. Movement joints should be planned prior to any construction so that they can be concealed behind drainpipes etc. Further guidance on moisture movement is available in the 'Guide to the Use of Tobermore Concrete Facing Bricks' and BSI documents BSEN 1996 (Eurocode 6) and PD 6697 (Recommendations for Design).
5. It is important to ensure that the mortar specified is suitable for the construction, see Table 15 of PD 6697. Mortar of strength class M4 will generally be suitable. Please refer to 'Guide to the use of Tobermore concrete facing bricks', which is available on request.
6. When building with dissimilar materials allowances should be made for differential movement. Design guidance from a structural engineer should be sought when combining dissimilar materials such as clay and concrete facing bricks. Examples of using dissimilar materials would be where a clay brick is used to build up to the dpc level and then Tobermore concrete facing bricks are used above the dpc. In some circumstances the dpc acts as a slip plane to separate the two materials which helps to dissipate tensile stress. However expert guidance should always be sought as to ensure structural stability as further slip planes or bed reinforcement may need to be incorporated into the design.
7. It is recommended that this guidance is discussed with all persons involved in the design and construction of the building work.

FOR SECURA PRODUCTS

Installation - Secura

All Secura products should be installed in accordance with British Standard BS8002. When constructing a retaining wall, ensure that you follow the design provided by the scheme engineer.
